GABRIELA CLEMENTE

Neuroscience & Data Science · Scientific Communication · Medical Affairs Candidate
São Paulo, SP · gabrielaa.clemente@gmail.com · +55 (11) 99896-7676 · github.com/gabrielaclemente

PROFESSIONAL SUMMARY

Neuroscience and Computer Science graduate from Middlebury College (one of the most selective liberal arts colleges in the U.S.; GPA 3.69/4.0), with extensive experience leading translational neuroscience research, presenting scientific findings, mentoring researchers, and communicating complex biological concepts to diverse audiences. Awarded High Honors for undergraduate thesis research and selected as a Parkinson's Foundation Summer Fellow. Combines scientific rigor with advanced data-analysis skills (Python) — an increasingly valuable differentiator as Medical Affairs moves toward real-world evidence and data-driven decision-making. Seeking to apply scientific expertise, stakeholder engagement, and relationship-building abilities as a Medical Science Liaison to support evidence-based medical decision-making and scientific exchange within Medical Affairs.

RESEARCH INTERESTS & EXPERTISE

Neuroinflammation · Neurodegeneration · Traumatic Brain Injury · Glial Biology · Molecular Neuroscience · Experimental Therapeutics · Scientific Data Analysis

EDUCATION

Bachelor of Science in Neuroscience & Computer Science *May 2026 · GPA 3.69/4.0*

Middlebury College — Middlebury, VT, USA (Top-15 U.S. liberal arts college)

- Awarded High Honors for undergraduate thesis investigating molecular and immune responses to traumatic brain injury.
- Relevant coursework: Biochemistry, Research Methods, Statistics, Bioinformatics Algorithms, Information Visualization, Data Structures.

SKILLS

- Scientific Data Analysis: Python (advanced), Pandas, NumPy, statistics, data cleaning and transformation, visualization (Matplotlib, Seaborn), advanced Excel (pivot tables, formulas).
- Research & Project Management: funded proposal writing, experimental design, planning and scheduling, end-to-end execution, documentation, and stakeholder communication.
- Tools: Git/GitHub, SQL/BigQuery (basic), REST APIs, Google Workspace, Microsoft Office.

RESEARCH EXPERIENCE

Researcher — Molecular Lead, Traumatic Brain Injury Program *Spring 2023 – May 2026*

Crocker Lab, Middlebury College — Middlebury, VT

- Led the molecular component of a multi-year traumatic brain injury research program investigating neuroinflammatory signaling pathways following injury, owning the work from concept to delivery.
- Conducted experimental design, data analysis, interpretation, and scientific reporting for an undergraduate thesis awarded High Honors.
- Built and maintained an automated Python pipeline analyzing over 19,000 confocal microscopy images for large-scale molecular-marker quantification, image segmentation, and pattern detection.
- Trained and mentored seven researchers in laboratory techniques, image-analysis workflows, and research methods, adapting scientific concepts to varying experience levels; developed documentation and standardized workflows to ensure project continuity after graduation.
- Presented scientific findings to faculty, collaborators, and conference audiences, facilitating scientific discussions and responding to questions on study design, methodology, and results.

Parkinson's Foundation Summer Fellow *Summer 2025*

Northwestern University, Feinberg School of Medicine — Chicago, IL

- Selected for a competitive fellowship after writing and securing funding for an independently proposed neurodegeneration research project.
- Collaborated closely with the principal investigator to define research objectives, align project priorities, communicate progress, and execute the project.
- Coordinated research activities and quantitative data analysis, identifying patterns and trends across experimental datasets.
- Presented results to scientific audiences through reports and technical presentations.

Research Intern — Cell Culture & Data Analysis *Summer 2024*

Mazzulli Lab, Northwestern University, Feinberg School of Medicine — Chicago, IL

- Collected and processed quantitative data from assays and confocal microscopy in neurodegeneration research, applying normalization and quality control for reproducible results.
- Worked within a multidisciplinary neuroscience team, with strong attention to data consistency and rigor.

Research Intern *Summer 2023*

University of São Paulo (USP) — São Paulo, Brazil

- First applied-research experience in Brazil; performed systematic experimental organization and data collection.

SCIENTIFIC PRESENTATIONS & COMMUNICATION

- Presented original research on molecular and immune responses following traumatic brain injury in Drosophila at the 2026 NEURON Undergraduate Neuroscience Conference.
- Findings from the project are being advanced for presentation at the Society for Neuroscience Annual Meeting by successor researchers; established the workflows and trained the successors to ensure continuity.
- Built collaborative relationships with faculty mentors, researchers, and multidisciplinary scientific teams across multiple institutions to support project execution and knowledge sharing.
- Authored scientific reports and research documentation; served as the technical and scientific reference within the laboratory.

TECHNICAL PROJECTS

Molecular Image Processing Pipeline — Senior Capstone (TBI) *2023 – 2026*

Python · github.com/gabrielaclemente/CrockerLabMolecularTBI

- End-to-end, sole-authored system for automated large-scale confocal microscopy analysis: segmentation, pattern detection, noise treatment, and marker extraction.

Genomics Pipeline — Bioinformatics *2025*

Python · github.com/gabrielaclemente/bioInfoFinalProject_MM-GC

- Pipeline for processing post-trauma genomic datasets: sequence alignment, differential expression analysis, and reproducible result generation.

LEADERSHIP & COMMUNITY ENGAGEMENT

Board Member — Midd Volunteers *Spring 2023 – Spring 2024*

Middlebury College — Middlebury, VT

- Served as liaison between community partner organizations and student volunteers, coordinating communication, relationship management, and volunteer initiatives.

ADDITIONAL INFORMATION

- Languages: Portuguese (native), English (native/fluent), Spanish (intermediate) — an asset for engaging with global teams in the pharmaceutical industry.
- Brazilian Category B Driver’s License (active); valid United States Driver’s License.
- Available for extensive domestic travel (key requirement for MSL roles).
